

## Special Issue

# Colorectal Cancer: Current Concept and Emerging Treatments

### Message from the Guest Editor

This Special Issue focuses on current surgical concepts (robotic versus laparoscopic rectal cancer surgery) as well as by standing treatment and therapy options, such as total neoadjuvant therapy for high-risk rectal cancer (cT4,cN2, EMVI+, CRM+ and lateral pelvic nodes), the possibility of neoadjuvant immunotherapy for dMMR-colon cancer (NICHE-2- study), and finally, the management of a complete pathological response after neoadjuvant therapy, especially for patients unsuitable for sphincter-sparing surgery. Furthermore, evidence needs to be gathered regarding indications for adjuvant chemotherapy after neoadjuvant chemoradiotherapy with an ypN+-situation and Dworak-Stadium II and III.
