# Recent Advances in Intracranial Aneurysm Treatment

### Message from the Guest Editor

The field of intracranial aneurysm treatment is evolving rapidly, both in terms of improving the results of aneurysm obliteration and the safety of treatments, but also in terms of providing a better standard of care for patients with subarachnoid hemorrhage. With the high volume of research being conducted every year in various centers all over the world, it is important to collate the highlights of this research in a Special Issue. There are many unknown questions waiting to be answered, and choosing the right approach for the right patient still remains an elusive, intricate issue. Therefore, I invite you to submit updates in this fascinating area of interest to the forum of open access scientific debate housed within this Special Issue.
