Long COVID and Cardiovascular Health: Clinical Perspectives on Risk and Management

Message from the Guest Editors

Since the first cases of COVID-19 were diagnosed in November 2019 in China, massive efforts have been invested in encountering a cure and in improving the outcome of patients infected with the SARS-CoV-2 virus. At the end of 2020, several researchers observed that some patients had a prolonged recovery period after acute COVID-19 infection. These subjects still had persistent symptoms or developed new complaints up to 4 months after the initial viral infection. This disease was named long COVID and, according to the World Health Organization, it affects 10-20% of all patients recovering from a SARS-CoV-2 infection. Long COVID has been classified as a complex syndrome, involving multiple systems and organs with a predisposition for the cardiovascular system. This Special Issue focuses on original articles and reviews on new approaches targeting the management, diagnosis, and treatment of cardiovascular symptoms and pathologies associated with long COVID.

- cardiovascular disease
- long COVID therapy
- management of long COVID

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
