Guidelines for the Management of Pulmonary Arterial Hypertension

Message from the Guest Editors

Pulmonary arterial hypertension is a serious disease caused by vasoconstriction and remodeling of the pulmonary vasculature, which, in the absence of appropriate therapy, ultimately leads to right ventricular failure and death. Recently published guidelines focus on the new hemodynamic definition of pulmonary hypertension, a new diagnostic algorithm with expedited referrals for severe or complex cases, the role of noninvasive work-up to distinguish among different groups of pulmonary hypertension, and the importance of risk assessment to guide treatment options in both incident and prevalent cases. In this Special Issue, we examine the application of these new concepts in the clinical management of pulmonary arterial hypertension, such as the role of echocardiography in identifying the probability of pulmonary hypertension, new developments in imaging and exercise testing in the pulmonary hypertension work-up, and the technique of right heart catheterization to correctly identify various clinical phenotypes of pulmonary hypertension. Finally, and importantly, we describe the integrated diagnostic approach and treatment algorithm in patients with pulmonary arterial hypertension.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andrès

Internal Medicine Department, University Hospital Strasbourg, 67081
Strasbourg, France

Prof. Dr. Kent Doi

Department of Emergency and Critical Care Medicine, The University of
Tokyo, Tokyo, Japan

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.5 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
