Clinical Advances in Inflammatory Bowel Disease Surgery

Message from the Guest Editor

For Crohn's disease, attempts have been made to reduce the reoperation rate by devising new anastomotic methods. In addition, the development of surveillance and appropriate treatment methods for cases with cancer is a problem. Evaluation of the patient's QOL is also an important evaluation method. I look forward to a paper on the development of surgical treatment for IBD from various perspectives.

- Inflammatory Bowel Disease
- Ulcerative colitis
- Crohn's disease
- Emergency surgery
- Laparoscopic surgery
- Minimally invasive surgery
- Colitis associated cancer
- Surgery for anal lesion of Crohn's disease
- Quality of life
