New Advances in Hepato-Pancreato-Biliary (HPB) Surgery

Message from the Guest Editors

The treatment of malignant tumors located in the pancreas, the liver or the extrahepatic biliary tree requires an MDT approach. Surgery represents the only treatment option with curative intent. Recently, significant progress has been documented in regard to the operative and the oncological outcomes following various HPB procedures. However, we still have a long way to go and focused research on the field becomes of paramount importance. We are pleased to invite you to contribute your valuable work to the Special Issue “New Advances in HPB surgery”. This Special Issue aims to highlight the most recent innovations in the management of patients with pancreatic, liver and biliary malignancies focusing especially on perioperative management and the operative / interventional outcomes. We look forward to receiving your contributions.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
