Treatment of Spine Degenerative Diseases: Latest Advances and Prospects

Message from the Guest Editor

Spinal degenerative diseases are common in patients who undergo spine surgery and have been a hot topic and focus of research in recent years. In the current treatment strategy, the treatment is mainly divided into conservative treatment and surgery. The aim of conservative treatment is to eliminate or reduce clinical symptoms by eliminating local inflammation and tissue edema. Surgical treatment involves decompression, bone grafting and fusion to rebuild the balance and stability of the spine in order to improve the quality of life of the patient. With the continuous development of new technologies and methods, the treatments of spinal degenerative diseases have entered a new phase. The aim of this Special Issue is to provide a comprehensive overview of the important discoveries in the diagnosis and treatment of spinal degenerative diseases and the latest clinical research advances. Therefore, clinicians and scholars in spine surgery or related fields worldwide are encouraged to submit their clinical studies or reviews to this journal. ,

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
