Diagnosis and Treatment of Cardiovascular Diseases in the Elderly

Message from the Guest Editor

Cardiovascular diseases (CVDs) remain the leading cause of morbidity and mortality in the elderly population worldwide. Ageing is associated with progressive structural and functional changes in the cardiovascular system, as well as with the accumulation of comorbidities and polypharmacy, which complicate both diagnosis and treatment. This Special Issue aims to provide a comprehensive overview of the latest advances, challenges, and strategies in the diagnosis, management, and prevention of CVDs in older adults. Key topics will include age-related cardiovascular pathophysiology, the role of frailty and cognitive impairment in clinical decision-making, non-invasive and invasive diagnostic tools adapted for elderly patients, and tailored therapeutic approaches including pharmacological, interventional, and lifestyle interventions. We welcome original research articles, reviews, and clinical perspectives that highlight innovative models of care, multidisciplinary approaches, and real-world data addressing the unique needs of the ageing population.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's (JCM)* staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
