Vertigo and Dizziness in Children: Clinical Updates

Message from the Guest Editor

Vertigo and dizziness in children are often underdiagnosed and can result from various etiologies, including vestibular disorders, migraines, and central nervous system issues. Recent clinical updates have emphasized the importance of a thorough history and physical examination to differentiate between benign and serious causes. Diagnostic approaches may include audiometry, vestibular testing, and neuroimaging when indicated. Treatment strategies are tailored based on the underlying cause and may involve vestibular rehabilitation, medication, or lifestyle modifications. Early recognition and intervention are crucial to prevent complications and improve quality of life. Continued research into pediatric vestibular disorders is thus essential for enhancing diagnostic accuracy and treatment efficacy. In this Special Issue, we aim to collect clinical, experimental, and review studies focusing on vertigo and dizziness in children, and thus provide new perspectives and insights into clinical practice. We look forward to receiving your submissions.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
