Management of Major Orthopaedic Trauma

Message from the Guest Editor

Major orthopaedic trauma is the most frequent reason for operative management of polytrauma patients. Injuries of the axial skeleton (spine, pelvis acetabulum), long bone fractures, complex metaphyseal and intraarticular fractures, limb- and life-threatening musculoskeletal injuries, open fractures, and fractures with challenging soft tissue injuries and complications are the classic examples within this challenging area. I hope you can contribute with your latest research to this special issue, which I am editing for the benefit of our multiply injured patients.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
