Management of Acute Respiratory Distress Syndrome due to COVID-19 Infection

Message from the Guest Editor

The COVID-19 pandemic has seen a surge of patients with acute respiratory distress syndrome (ARDS) in intensive care units across the globe. Several hundreds of thousands of patients have been treated in intensive care units. The mortality rate is reasonably high and increases up to 80% depending on the severity of ARDS and the patient's age. The understanding of the pathophysiology, experience about diagnostic tools, and the knowledge about managing these critically ill patients have grown. However, it is also clear that much remains to be learned. With this Special Issue, we hope to encourage submissions that discuss the current state-of-the-art, address ongoing knowledge gaps, and focus on ongoing controversies related to the Management of Acute Respiratory Distress Syndrome due to COVID-19 Infection.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr s

Internal Medicine Department, University Hospital Strasbourg, 67000
