Insights into Erectile Dysfunction

Message from the Guest Editor

All epidemiological studies show that erectile dysfunction (ED) affects 30% of the population of all ages. It is therefore a public health problem. The arrival of type V phosphodiesterase inhibitors almost 25 years ago has transformed the approach to ED, offering effective symptomatic treatment to almost 40% of patients. However, the pathophysiological and etiological approaches have been neglected. As a result, many patients are left to fend for themselves when magic pills are ineffective or poorly tolerated. Here, we show that ED, like any other symptom, requires a diagnostic search that is all the more demanding because its etiology is multifactorial. Furthermore, in the very large number of patients with vascular risk factors, the onset of ED of proven arterial origin precedes the onset of coronary heart disease by several years. The discovery and management of ED, at any age, must be an integral part of human medicine.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr  s

Internal Medicine Department, University Hospital Strasbourg, 67000
Strasbourg, France

Prof. Dr. Kent Doi

Department of Acute Care Medicine, University of Tokyo, Tokyo, Japan

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
