Needling Interventions for the Management of Musculoskeletal Pain Syndromes

Message from the Guest Editor

Musculoskeletal pain syndromes include several conditions causing higher related disability and decrease in health-related quality of life. In recent decades, there has been an increasing interest and knowledge in nociceptive pain mechanisms which has changed the actual clinical reasoning for the management of chronic pain. The use of needling interventions, in any form, has attracted particular attention from clinicians. There are several forms of needling interventions, including dry needling, percutaneous nerve electrical stimulation (PENS), neuromodulation, electrical dry needling, and others (wet needling injections). The combination of any needling intervention with manual therapy, exercise or pain neuroscience education may be useful in the management of chronic pain. This Special issue targets the topic of needling therapies (wet and dry) from a broad perspective. Any research group investigating the effects of needling interventions for the management of chronic pain is encouraged to submit to this Special Issue.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr  s

Internal Medicine Department, University Hospital Strasbourg, 67000

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
