Global Expert Views on Clinical Aesthetic Plastic Surgery

Message from the Guest Editors

Aesthetic medicine has undergone tremendous advancements over the years. As the field of plastic surgery has evolved over the years, patients have increasingly sought more minimally invasive procedures, which has further propelled the advancement of aesthetic medicine. Recently, even minimally invasive plastic surgeries have begun to incorporate direct ultrasound guidance to better prevent complications, and as technology continues to advance, less invasive procedures that are more beneficial to patients are being developed. However, many procedures that lack scientific validation are still being performed, often driven by the ignorance of physicians and the desires of patients. At this juncture, it is crucial for physicians to approach aesthetic medicine with a scientific perspective, ensuring that new procedures and products are validated through rigorous scientific methods. Therefore, plastic surgeons, dermatologists, and cosmetic doctors are encouraged to submit their clinical studies and research as original articles or reviews to this Special Issue.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
