Clinical Updates on Perioperative Pain Management: 3rd Edition

Message from the Guest Editors

Pain is always a personal experience that is influenced to varying degrees by biological, psychological, and social factors. Optimal perioperative pain management positively impacts the quality of patients' recovery, reducing the incidence of complications. For this reason, multimodal approaches, including regional anesthesia techniques, analgesics drugs, and rehabilitation programs, play key roles in the field of research, used with the aim to improve perioperative analgesia. For this Special Issue, we welcome original high-quality works about the use of innovative regional anesthesia techniques, including neuraxial blocks, peripheral nerve blocks, and fascial plane blocks, to treat perioperative pain. Moreover, papers investigating the use of specific drugs, rehabilitation protocols, or innovative devices to manage perioperative analgesia will be considered. Accepted manuscripts may be in the form of research papers, original studies, or reviews.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
