Diagnoses and Treatments of Juvenile and Rheumatoid Arthritis

Message from the Guest Editor

Inflammatory arthritides affect kids and adults worldwide and represent key disabling illnesses when diagnosed and treated lately in the disease course. The outcome changes when diagnosed and treated very early on. The great discovery of the last thirty years has been the availability of new drugs and the demonstration that, when used early on after diagnosis, the control of inflammation and bone-joint damage can lead to full or satisfactory remission with a pretty full maintenance of daily living activities. There are at least four subsets of the disease (seropositive, seronegative, RA in the elderly, and the difficult-to-treat subsets) that deserve specific attention because diagnosis and treatment may be particularly problematic. All these topics will be deeply covered in the coming Special Issue, which will describe the achievements obtained so far and the unmet needs that still need to be defined.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andrès

Internal Medicine Department, University Hospital Strasbourg, 67081
Strasbourg, France
