Polycystic Ovary Syndrome in Gynecologic Endocrinology

Message from the Guest Editor

Polycystic ovary syndrome (PCOS) is one of the most common endocrine disorders in women of reproductive age. Currently, polycystic ovary syndrome is viewed as a complex prehistoric genetic trait that has lasted through evolutionary processes over approximately the last 50,000 years. Due to its complexity, it is of high clinical relevance. Affected women are often burdened by the cosmetic consequences of hyperandrogenemia, hyperinsulinemia, an increased risk for diabetes mellitus, oligomenorrhea, and sub- or infertility, the necessity for artificial reproductive techniques, and an increased risk for various pregnancy complications. Although PCOS has for decades been the focus of many scientists, many patients still feel that the available treatment options are insufficient. This, in addition to the fact that the exact pathophysiology remains unclear, suggests that we need to increase our clinical knowledge about this frequently occurring, complex, and highly relevant disease. Hence, we welcome manuscripts on all clinical issues of polycystic ovary syndrome and would be happy to review your contributions to our Special Issue in the Journal of Clinical Medicine.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
