Management of Acute Pancreatitis in Children and Adults: Current Practice and Future Opportunities

Message from the Guest Editor

There are recent advances in the understanding of the risks of acute pancreatitis that are both age-dependent and gender-specific. Further, there have been advances in the measurement of severity of the disease and management that are mostly focused on the adult population. Although there are several agents that have been shown to attenuate the key pathologic responses of pancreatitis, these agents for the most part have been slow to enter clinical practice. This Special Issue is devoted to articles that review key diagnostic, management and/or treatment strategies in acute pancreatitis. Importantly, articles that address age and gender differences and provide insights for opportunities to address unmet needs and opportunities to improve outcome are highly encouraged.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
