Recent Updates in the Management of Pneumonia and COVID-19

Message from the Guest Editor

Respiratory infections are highly prevalent and represent an important cause of mortality, morbidity, and antibiotic use. The COVID-19 pandemic has changed views on respiratory infections, and the way in which evidence for optimal diagnostic and treatment strategies is collected is rapidly evolving. The optimization of the care for patients with respiratory infections is not only important for optimal health outcomes, but also in terms of cost-for-care and antimicrobial stewardship. The focus of this Special Issue is to provide up-to-date evidence to aid physicians in their care for patients with respiratory infections.
