Psychosocial Approaches Using Technology in Older People with Mild Cognitive Impairment or Dementia

Message from the Guest Editors

Dementia raises complex social health challenges for patients, their families, and society since it leads to progressive deterioration in cognitive functioning and activities of daily living. So far, pharmacological advances have not provided comprehensive help for people with dementia and their carers. Psychosocial approaches can provide great support for improving the lives, social health, and quality of life of such individuals. Further, technology can support the maintenance of regular life and improve the social health of people with dementia and their families. The present Special Issue aims to present a collection of studies that describe the latest technological advances in the application of psychosocial interventions to improve the care and social health of people with dementia and their carers.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
