Psychosocial Approaches Using Technology in Older People with Mild Cognitive Impairment or Dementia

Message from the Guest Editors

Dementia raises complex social health challenges for patients, their families, and society since it leads to progressive deterioration in cognitive functioning and activities of daily living. So far, pharmacological advances have not provided comprehensive help for people with dementia and their carers. Psychosocial approaches can provide great support for improving the lives, social health, and quality of life of such individuals. Further, technology can support the maintenance of regular life and improve the social health of people with dementia and their families. The present Special Issue aims to present a collection of studies that describe the latest technological advances in the application of psychosocial interventions to improve the care and social health of people with dementia and their carers.

About the Journal

Message from the Editorial Board

Journal of Clinical Medicine (ISSN 2077-0383) is an international, peer-reviewed, open access journal dedicated to advancing clinical and preclinical research. Our Editorial Board and staff are committed to delivering cutting-edge, timely, peer-reviewed articles spanning the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and impactful research articles, as well as reviews that are clinically significant and relevant to the full spectrum of medical disciplines. All full texts are archived in PubMed Central and indexed in SCIE (Web of Science), Scopus, PubMed, and other major databases. We invite you to submit your manuscript for publication, as well as join our community as a reviewer or reader online.
