Psychotherapy and Clinical Psychology during COVID-19

Message from the Guest Editor

Over the past two years, we have all been dealing with the spread of the COVID-19 pandemic and have observed the disruptive impact that the pandemic and related containment measures have had on people's psychological health. The COVID-19 pandemic has also profoundly changed the work of clinical psychologists. All these changes call for a better understanding of the effects of the pandemic on mental health and the associated risk and protective factors in different populations, including those with pre-existing vulnerabilities and/or those most exposed to the pandemic's implications (such as, but not limited to: adolescents and young adults, healthcare workers, individuals who lost a family member due to COVID-19, patients with a chronic disease). In this Special Issue, both observational and interventional studies, as well as review papers (systematic review and meta-analysis), on the implications of the pandemic and related restrictions on psychological well-being, associated risk and protective factors, and changes in clinical practice and psychotherapy delivery are welcome.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
