Clinical Advances in Head and Neck Cancer Surgery

Message from the Guest Editor

This Special Issue, “Clinical Advances in Head and Neck Cancer Surgery”, highlights the latest developments in the field of head and neck cancer surgery. Surgical treatment is a common option for head and neck cancer. The extent of surgery depends on the stage and location of the cancer. The goal of surgery is to remove cancerous tissue alongside a margin of healthy tissue to reduce the risk of recurrence. Surgery may be performed alone or in combination with other treatments, such as radiation therapy or chemotherapy. In some cases, reconstructive surgery may be required to restore the function of the upper airway and digestive tract. This Special Issue features articles on various topics, including surgical techniques, outcomes, and advancements in technology, providing valuable insights into the challenges and opportunities in head and neck cancer surgery in addition to offering practical guidance for clinicians for improving the care of patients with this challenging disease.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
