on diagnostic and therapeutic modalities and risk factors, as well as on prognostic implications in patients with symptomatic pelvic organ prolapse and lower urinary tract symptoms, especially overactive bladder and various clinical types of urinary incontinence, also including modern management of urogenital fistulas.

Moreover, new methods of pelvic floor imaging will also be discussed in this Special Issue, since their implementation into clinical practice can substantially enhance our skills in the diagnosis and management of pelvic floor disorders. I am confident that this Special Issue concerning the frontiers of our specialty will keep us up to date with the latest advances in urogynecology, thanks to the contributions of renowned international experts.
