

Special Issue

Clinical Diagnosis and Management of Migraines and Headaches

Message from the Guest Editor

Headaches and migraines are among the most frequent human disorders. The current third edition of the International Classification of Headache Disorders recognizes 367 main forms of headache. Primary headaches are diseases in their own right. They are responsible for over 92% of all headaches. Migraine is a particularly disabling neurological disorder. It can occur in 48 subtypes and can severely disable sufferers for decades of their lives. The World Health Organization classifies migraine as the most disabling disease in women between the ages of 15 and 49. Migraine affects more than 15% of the global population within a year. It occurs in recurrent attacks. This Special Issue on "Clinical Diagnosis and Management of Migraines and Headaches" aims to highlight recent developments in the diagnosis and treatment of migraine and headache. The articles are intended to help implement the new findings directly into the clinical and practical care of migraine and headache patients.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
