Clinical and Surgical Andrology: Current Challenges and Advances

Message from the Guest Editors

The field of the male reproductive system, whose pathology and even physiology have been for a long time disregarded or ignored, is gaining increasingly more relevance across the world. Andrology can be defined as a unitary medical and surgical discipline dealing with the pathophysiology of the male reproductive system during the entire life course of the male subject, from development to maturity and senescence. The future of andrological medical and surgical treatments is exciting and, in this Special Issue, entitled "Clinical and Surgical Andrology: Current Challenges and Advances", we present the latest cutting-edge developments in the fields of male infertility, erectile dysfunction, testis and penile cancer, ejaculation/orgasmic disorders and all the surgeries related to male sexual dysfunction. The aim of this Special Issue is to produce an outstanding updated collection that is able to provide sufficient information to help practitioners with the recent breakthroughs in this field and to guide them in improving and optimizing medical practice.
