Diagnosis and Management of Temporomandibular Joint Disorders

Message from the Guest Editors

It is with pleasure that we announce the opportunity of joining us in this exciting publishing adventure on Temporomandibular Disorders (TMDs). As we are all aware, much has yet to be done as regards a proper science transfer process in this intriguing field of practice that embraces multispecialist involvement and requires knowledge from different perspectives (e.g., biomechanical, neurological, psychological). Within this premise, this Special Issue aims to collect high-quality papers that report clinical research data on the topics of TMD diagnosis and management. Readers will be provided with interesting content to gain a deeper understanding into the biopsychosocial model of pain.
