Latest Advances in Tetralogy of Fallot

Message from the Guest Editors

Although the survival rate after Tetralogy of Fallot repair in infants has greatly increased, the pulmonary regurgitation consequence of the right ventricular outflow tract reconstruction can lead to serious problems in the long-term follow-up of these patients. Therefore, it would be desirable to perform PVR in the asymptomatic patient, just before the onset of ventricular dysfunction, if we could know at what threshold of RV dilation it arises. In addition, it is still not fully understood at what threshold of dysfunction, significantly increases. Consequently, it continues to be complicated in asymptomatic repaired tetralogy of Fallot, to choose the right timing between a potentially fatal arrhythmia and/or a not-recoverable ventricular dysfunction and an early PVR with the increased risk related to repeated prosthetic valve replacement and endocarditis. Hence, this Special Issue will highlight recent advances in support of the assessment of biventricular function (echocardiographic and cardiac magnetic resonance strain) and the objective evaluation of the functional capacity (cardiopulmonary exercise testing).

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr  s

Internal Medicine Department, University Hospital Strasbourg, 67000
Strasbourg, France

Prof. Dr. Kent Doi

Department of Acute Care Medicine, University of Tokyo, Tokyo, Japan

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1
(General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
