Management of Complex Infective Endocarditis

Message from the Guest Editors

Cardiovascular disorders represent the leading cause of mortality worldwide. Infective endocarditis is a fairly uncommon disease with a high rate of mortality. Taking into consideration the complexity of this disease, current management strategies include a multidisciplinary approach and measures to ensure early diagnosis, lower rates of complications, and improved mortality rates. With advancements in the field of medicine and patient care, the number and severity of cases have been on the rise. There has been an increase in the incidence of infective endocarditis, with reports that the incidence in some countries has doubled over the last decade. We welcome the submission of research articles that can help physicians better understand and treat infective endocarditis.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
