

Special Issue

Oral and Maxillofacial Surgery in 2023 and Beyond

Message from the Guest Editors

Over the last few years, oral and maxillofacial surgery has seen significant improvements in the medical and dental fields. Oral and maxillofacial surgery is a specialized area of dentistry that focuses on the diagnosis, treatment, and prevention of conditions related to the jaw and facial structures, as well as the treatment of diseases and injuries of the mouth and teeth. Some common areas of focus in oral and maxillofacial surgery include oral surgery, dental implants, bone grafts and reconstruction, orthognathic surgery, maxillofacial deformities, temporomandibular joint disorders (TMJ), maxillofacial trauma, and head and neck cancer. For this Special Issue on "Oral and Maxillofacial Surgery", we invite you to submit proposals in every field of research in the area, with a focus on the new techniques and developments of clinical treatment in this field.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
