Clinical Advances in Pediatric Hepatobiliary Surgery

Message from the Guest Editor

The field of pediatric hepatobiliary surgery has significantly transformed over the past decades. Innovations in diagnostic modalities have improved the early detection and characterization of congenital and acquired hepatobiliary disorders in children. Moreover, minimally invasive approaches have emerged in the field of pediatric hepatobiliary surgery for the management of several disease entities, including but not limited to biliary atresia, choledochal cysts, and liver tumors. Additionally, refinements in perioperative care, anesthesia, and transplantation protocols have considerably improved the survival outcomes and quality of life for children with liver diseases. In this Special Issue, we invite submissions highlighting cutting-edge developments in pediatric hepatobiliary surgery, spanning innovations in diagnostics, surgical management, pre- and postoperative care, and long-term outcomes.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr  s

Internal Medicine Department, University Hospital Strasbourg, 67000
Strasbourg, France
