Transcatheter Aortic Valve Replacement: Latest Advances and Prospects

Message from the Guest Editors

Aortic stenosis is the most common degenerative valvular heart disease leading to surgery or transcatheter therapy in Europe and North America. During the last decade, transcatheter aortic valve replacement (TAVR) has become an established treatment for elderly patients with severe aortic stenosis across the surgical risk spectrum. Despite the substantial reduction in procedural complications with device iterations, increasing experience and procedure simplification, when they do occur, they may have a negative impact on patient outcomes. Therefore, continuous efforts seek to minimize some of the knowledge gaps and unresolved issues, such as choice of intervention in patients with bicuspid aortic valve or small aortic annulus, management of concomitant comorbidities, conduction disturbances, future coronary access, and long-term durability. This Special Issue aims to address some of these gaps, including pre-procedural planning, streamline procedure, and post-procedural management, to improve clinical outcomes and ensure the best lifetime management for these patients. Both original research contributions and state-of-the-art reviews are welcome.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr  s

Internal Medicine Department, University Hospital Strasbourg, 67000
Strasbourg, France

Prof. Dr. Kent Doi

Department of Acute Care Medicine, University of Tokyo, Tokyo, Japan

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
