Anesthetic Management in Perioperative Period

Message from the Guest Editor

There are many options for anesthetic management during surgery. While there is consensus on the importance of multimodal analgesia, and recommendations for early rehabilitation and the prevention of nausea and vomiting, the place of many techniques (pharmacological, including the use of opioids, non-pharmacological and follow-up) remains debated. This Special Issue aims to cover remaining questions regarding the specific requirements of patient subgroups, innovative anesthetic techniques and descriptions of unmet needs after surgery, paving the way for future improvements. We particularly encourage the submission of patient-centered research results.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
