

Special Issue

Ankle Osteoarthritis

Message from the Guest Editor

In this Topical Collection, the readers will have the chance to receive an update on ankle osteoarthritis. Ankle osteoarthritis is a painful entity caused, in the majority of the cases, by a post-traumatic etiology, as a fracture or instability. The treatment shall be first conservative: painkillers, oral viscosupplementation, infiltrations, physiotherapy, orthoses, and special shoes. In the event of necessary surgery, joint-preserving surgery might deload the partially osteoarthritic joint. In full-osteoarthritis cases, a total ankle arthroplasty might be the next possible option, providing pain reduction, restoring joint function and giving better life quality to the patient. Ankle arthrodesis, as the traditional treatment of ankle osteoarthritis, shall be the final surgical treatment option.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
