Making and Management of Breast Reconstruction: From Theory to Clinical Practice

Message from the Guest Editor

Breast cancer surgery and breast reconstruction are probably among the most discussed (and sometimes controversial) topics of the past two centuries.

Cancer surgery and reconstruction procedures have been evolved in time and now are often thought as one in the same.

Correct planning takes a crucial role: to plan an excellent demolition to ensure satisfactory reconstruction (as well as local cancer treatment).

This Special Issue of Journal of clinical medicine entitled “Making and Management of Breast Reconstruction: from Theory to Clinical Practice” welcomes the submission of basic or clinical original articles, as well as systematic reviews, meta-analyses, and overviews, that discuss limits and points of strength of techniques for breast reconstruction as well as innovations and evolutions in this field.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
