Clinical Classification, Diagnosis and Treatment for Thalassemia

Message from the Guest Editor

Rare anaemias (RAs), ORPHA108997, include up to 132 rare and ultra-rare haematological conditions, representing a highly heterogeneous group of disorders. These are characterized by anaemia of variable degree, from mild forms to life-threatening chronic blood-transfusion dependence, and by complex and often unexplained genotype-phenotype correlations. More than 80% of RA are genetic disorders caused by mutations in more than 70 genes controlling red blood cell (RBC) production and structure. These mutations lead to alterations in haemoglobin (Hb) structure or synthesis, RBC maturation and differentiation, cell membrane structure, and enzyme deficiencies. The balance between haemolysis (mainly in the spleen) and erythropoiesis explains the severity of the anaemia and the patient's ability to respond to treatment(s). In this context, differential diagnosis, prognosis and patient stratification are often difficult. Some studies have already demonstrated the usefulness of the targeted-NGS (t-NGS) approach in the investigation of specific subtypes of RA.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr  s

Internal Medicine Department, University Hospital Strasbourg, 67000
Strasbourg, France

Prof. Dr. Kent Doi

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1
(General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
