Diagnosis, Treatment and Outcome in Complicated Monochorionic Twins

Message from the Guest Editors

Twin gestations occur in 2% of all pregnancies. Two-thirds of these twin gestations are dizygotic and one-third are monozygotic, thus leading to identical twins. Dizygotic twin gestations are always dichorionic and have two separate placentas. In contrast, the majority of monozygotic twin gestations are monochorionic in which both twins share their placenta. Monochorionic twin placentas are characterized by the invariable presence of vascular anastomoses connecting the two fetal circulations. Unbalanced blood transfusion through the vascular anastomoses can lead to severe fetal complications such as twin-twin transfusion syndrome (TTS), twin anemia-polycythemia sequence (TAPS) of twin reversed arterial perfusion (TRAP). In case of unequal placental sharing, selective fetal growth restriction (sFGR) can occur. Accurate and timely detection of these potentially devastating complications is of utmost importance, as well as optimal antenatal and postnatal management.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr  s

Internal Medicine Department, University Hospital Strasbourg, 67000
Strasbourg, France

Prof. Dr. Kent Doi

Department of Acute Care Medicine, University of Tokyo, Tokyo, Japan

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1
(General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
