## Head and Neck Surgery: Clinical Updates and Perspectives

Message from the Guest Editors

The field of head and neck surgery has notably expanded in the last several decades, and the technological advancement of open, microscopic, endoscopic, and robotic techniques has allowed us to achieve unprecedented progress. As we are continuously refining our therapeutic approaches to head and neck disorders, the well-known risk of impairing or even permanently damaging critical structures (nerves, vessels, etc.) and functions (swallowing, voice, sense of smell and taste, etc.) is always present.

Therefore, a comprehensive view on the most recent and cutting-edge strategies in this surgical specialty is of paramount importance. In this Special Issue of the Journal of Clinical Medicine, we invite you to submit your scientific contributions to this field in the form of original research articles, state-of-the-art or systematic reviews, or meta-analyses. We are looking forward to receiving your manuscripts.
