

Special Issue

Head and Neck Surgery: Clinical Updates and Perspectives

Message from the Guest Editors

The field of head and neck surgery has notably expanded in the last several decades, and the technological advancement of open, microscopic, endoscopic, and robotic techniques has allowed us to achieve unprecedented progress. As we are continuously refining our therapeutic approaches to head and neck disorders, the well-known risk of impairing or even permanently damaging critical structures (nerves, vessels, etc.) and functions (swallowing, voice, sense of smell and taste, etc.) is always present.

Therefore, a comprehensive view on the most recent and cutting-edge strategies in this surgical specialty is of paramount importance. In this Special Issue of the *Journal of Clinical Medicine*, we invite you to submit your scientific contributions to this field in the form of original research articles, state-of-the-art or systematic reviews, or meta-analyses. We are looking forward to receiving your manuscripts.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief
