Pathological Changes Associated with Congenital Zika Virus Infection

Message from the Guest Editor

Congenital ZKV infection is highly associated with fetal-neonatal microcephaly, which should be genetically distinguished from primary microcephaly. The clinical diagnosis of congenital ZKV infection relies upon a positive serologic test based on r-RT-PCT (real-time transcription polymerase chain reaction) and direct demonstration of ZKV-RNA on a cultured cortex specimen during autopsy, in cases of perinatal death. Prenatal diagnosis of brain malformations, through specific findings, may be detected by means of 2D/3D ultrasound as well as by means of fetal MR imaging. The main severe anomaly associated with ZKV congenital infection is microcephaly, which it is usually detected during the third trimester of pregnancy. Fetal MRI may be more accurate than ultrasound and may enhance the prenatal detection of polymicrogyria, laminar necrosis, and brain-stem anomalies. Neuropathology is mandatory, and demonstration of RNA virus in brain cells is critical to demonstrating a causative effect of ZKV congenital infection.

- Zika virus
- Congenital Zika virus infection
- Brain malformations
- Microcephaly
- Prenatal ultrasound
- Fetal MRI

About the Journal

Message from the Editorial Board

Journal of Clinical Medicine (ISSN 2077-0383) is an international, peer-reviewed, open access journal dedicated to advancing clinical and preclinical research. Our Editorial Board and staff are committed to delivering cutting-edge, timely, peer-reviewed articles spanning the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and impactful research articles, as well as reviews that are clinically significant and relevant to the full spectrum of medical disciplines. All full texts are archived in PubMed Central and indexed in SCIE (Web of Science), Scopus, PubMed, and other major databases. We invite you to submit your manuscript for publication, as well as join our community as a reviewer or reader online.

Editors-in-Chief

Prof. Dr. Emmanuel Andrès

Internal Medicine Department, University Hospital Strasbourg, 67081
Strasbourg, France

Prof. Dr. Kent Doi

Department of Emergency and Critical Care Medicine, The University of
Tokyo, Tokyo, Japan

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1
(General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.5 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
