Epithelial Ovarian Cancer: Focus on Targeted and Complementary Therapy

Message from the Guest Editor

Ovarian cancer is the most lethal gynecologic malignancy, mostly due to the late-stage diagnosis of the disease. First-line treatment of epithelial ovarian cancer is based on cytoreductive surgery and combination chemotherapy using taxane and platinum. Most patients will experience a recurrence, however, and targeted therapies, including angiogenesis and PARP inhibitors, have been recently approved for the treatment of ovarian cancer. New strategies of improved diagnosis, surgical resection, and treatment are sought, including measures that improve quality of life. We will consider all original research articles and review papers that support the advancement of diagnosis or treatment of ovarian cancer, including targeted, surgical, and complementary therapies.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr  s

Internal Medicine Department, University Hospital Strasbourg, 67000
Strasbourg, France

Prof. Dr. Kent Doi
