A New Era for Giant Cell Arteritis

Message from the Guest Editor

Giant cell arteritis (GCA), the most common form of systemic vasculitis in the elderly, can cause progressive and sometimes devastating complications. For decades, its pathophysiology remained unknown, biopsy of the temporal artery was the only cardinal diagnostic procedure, and its treatment was based on corticosteroids. However, studies in recent years have greatly increased our knowledge of GCA and will change clinical practice. The aim of this Special Issue is to highlight the most recent advances in the pathophysiology, diagnosis, including imaging methods, and clinical management of GCA. I look forward to receiving your contribution.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andrès

Internal Medicine Department, University Hospital Strasbourg, 67000
Strasbourg, France

Prof. Dr. Kent Doi
