Chronic Wounds or Hard to Heal Ulcers: Updating Epidemiology, Physiopathology, and Therapies

Message from the Guest Editor

Currently, there is an intense debate about the terminology, etiology, epidemiology, and current strategies for the prevention and management of so-called chronic wounds. Specifically, for certain types of wounds, the terminology is changing due to new insights into the physiopathology and etiology, leading to new theoretical models of wound development, for instance, the trend from decubitus or bed sores to pressure ulcers and, now, to pressure injuries. The case is similar for leg or lower extremity wounds, where different etiologies could be present. Nevertheless, such types of lesions are a remarkable public health problem due to the high numbers of people suffering from them, leading to a high impact on the direct cost burden and indirect indicators such as the quality of life of people suffering from wounds, and their families.

This Special Issue is intended to present cutting-edge original research and systematic, integrative, or scoping reviews on the epidemiology, risk factors, and physiopathology of those wounds; those on the existing strategies and emerging advanced clinical approaches for prevention and treatment management are also welcome.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andr  s

Internal Medicine Department, University Hospital Strasbourg, 67000
Strasbourg, France

Prof. Dr. Kent Doi

Department of Acute Care Medicine, University of Tokyo, Tokyo, Japan

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1
(General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.7 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
