

## Special Issue

# Clinical Advances in Knee Surgery

### Message from the Guest Editor

The knees are the most commonly replaced joint in the human body. Currently, many kinds of surgical treatment options are being developed for different types of knee injuries and disorders. There have been many developments in knee surgery—doctors are focusing on advances to make the procedure less invasive, more precise, and last longer, helping to lessen the likelihood of revision or secondary surgeries. In this Special Issue of *JCM*, we aim to provide an overview of recent advances in the field of knee surgery. Therefore, researchers in the field of knee surgery are encouraged to submit original articles or reviews to this Special Issue (case reports and short reviews are not accepted).

## About the Journal

### Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
