Recent Advances in the Diagnosis and Management of Neck Pain

Message from the Guest Editor

Neck pain is one of common symptoms between general population. Its annual prevalence has been reported as 12.1~71.5 % in general population and it has been reported that 11~14.1 % of laborer annually experience restriction of activity by neck pain. Thus, neck pain can be one of significant social and economical burden. In spine surgery field, postoperative neck pain is one of the well known factors having negative impact on patient satisfaction after surgery. Therefore, advance in diagnosis and management of neck pain can have significant impact on medical and social aspects. This Special Issue invites researchers in the field to contribute to the state of the art in the diagnosis and management of neck pain.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!
