Structural Heart Diseases: State of the Art from Diagnosis to Treatment

Message from the Guest Editors

“Structural heart disease” is any non-coronary cardiovascular abnormality, congenital or developed with aging, which weakens the heart’s structure. In the last few decades, many significant advances have been achieved in our understanding of the pathological mechanisms which underlie such conditions, and new diagnostic tools and treatment options have been developed. The scope of this Special Issue is to provide an overview of the latest advances in structural heart diseases’ diagnosis and treatment. Therefore, researchers in the field of structural heart disease are encouraged to submit an original article or review to this Special Issue (case reports and short reviews are not accepted).

About the Journal

Message from the Editorial Board

Journal of Clinical Medicine (ISSN 2077-0383) is an international, peer-reviewed, open access journal dedicated to advancing clinical and preclinical research. Our Editorial Board and staff are committed to delivering cutting-edge, timely, peer-reviewed articles spanning the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and impactful research articles, as well as reviews that are clinically significant and relevant to the full spectrum of medical disciplines. All full texts are archived in PubMed Central and indexed in SCIE (Web of Science), Scopus, PubMed, and other major databases. We invite you to submit your manuscript for publication, as well as join our community as a reviewer or reader online.

Editors-in-Chief
