# Advances on Scoliology, Diagnosis and Management of Scoliosis and Spinal Disorders

### Message from the Guest Editor

Scoliosis mainly affects children, who are the future of any society. The advent of new technologies is key in the study and advance of our insight into these diseases, with the aim of improving the quality of life of this sensitive group of people. The ultimate goal is to diminish or even eliminate the disease. These developments have led to better patient quality of life compared to what was experienced in the past. When proper management is not implemented, spinal disorders may lead to significant social problems and to enormous economic losses. It is very important to increase awareness for a social mission regarding the early detection of scoliosis and prevention of progressive spinal deformity.
