Systemic Sclerosis— Pathogenesis and Emerging Therapies

Message from the Guest Editors

Systemic Sclerosis (SSc) is surely one of the most intriguing autoimmune diseases and has for decades been completely orphan of effective treatments, burdened by several negative large trials. In the past few years, the effectiveness of bone marrow transplants and the approval of the first antifibrotic treatment for interstitial lung disease have revamped the enthusiasm for directly targeting the fibrotic process. In this Special Issue of the *Journal of Clinical Medicine* we aim to offer reviews and original research articles that highlight both profibrotic and immune pathways that may warrant therapeutic targeting.

About the Journal

Message from the Editorial Board

There has been an explosion of gene and target based research and therapeutics in the multitude of fields that compose clinical medicine. The *Journal of Clinical Medicine's* (JCM) staff and editorial board are dedicated to providing cutting edge, timely, and peer-reviewed articles covering the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and exciting research articles as well as clinically significant articles and reviews that are pertinent to the myriad of disciplines within medicine. The articles published are relevant to both primary care physicians and specialists. The journal's full-texts are archived in PubMed Central and indexed in PubMed. Please consider submitting your manuscripts for publication to our journal and check us out on-line!

Editors-in-Chief

Prof. Dr. Emmanuel Andrès

Internal Medicine Department, University Hospital Strasbourg, 67081
Strasbourg, France

Prof. Dr. Kent Doi
