Relationships between Trauma and Psychosis

Message from the Guest Editor

The associations between traumatic life events and the risk for psychosis have been repeatedly demonstrated in a variety of studies. A history of traumatic life events also seem to specifically increase risk for psychosis, as the association persists even when controlling for comorbid psychological symptoms. In this Special Issue, we will focus on recent advances in understanding the relationship between trauma and psychosis, including epidemiologic, psychosocial, and biological evidence that will help us understand the trauma-psychosis association. In attempting to understand this association, we will explore the relationship between trauma and the full continuum of psychosis, from psychotic-like experiences to psychotic disorder diagnoses.

About the Journal

Message from the Editorial Board

Journal of Clinical Medicine (ISSN 2077-0383) is an international, peer-reviewed, open access journal dedicated to advancing clinical and preclinical research. Our Editorial Board and staff are committed to delivering cutting-edge, timely, peer-reviewed articles spanning the diverse subspecialties of clinical medicine. The journal publishes concise, innovative, and impactful research articles, as well as reviews that are clinically significant and relevant to the full spectrum of medical disciplines. All full texts are archived in PubMed Central and indexed in SCIE (Web of Science), Scopus, PubMed, and other major databases. We invite you to submit your manuscript for publication, as well as join our community as a reviewer or reader online.

Editors-in-Chief

Prof. Dr. Emmanuel Andrès

Internal Medicine Department, University Hospital Strasbourg, 67081
Strasbourg, France

Prof. Dr. Kent Doi
