

## Special Issue

# Cyber-Physical Security for Critical Infrastructures

### Message from the Guest Editors

Because of the increasing interconnection between the digital and physical worlds, these infrastructures and services are more critical, sophisticated, and interconnected than ever before. This makes them increasingly vulnerable to attacks, as confirmed by the steady rise of cyber-security incidents such as phishing or ransomware, but also cyber-physical incidents, such as the physical violation of devices or facilities in conjunction with malicious cyber activities. To address all these challenges, this Special Issue has the objective of bringing together security researchers and practitioners from the various verticals of critical infrastructures (e.g., the financial, energy, health, air transport, communication, gas and water domains) to rethink cyber-physical security in light of the latest technological developments (e.g., cloud computing, blockchain, big data, AI, internet-of-things (IoT)).

- critical infrastructures
- cyber-physical security
- collaborative risk assessment
- predictive security

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Danda B. Rawat

Department of Electrical Engineering and Computer Science, Howard  
University, Washington, DC 20059, USA

---

#### Author Benefits

##### High Visibility:

indexed within ESCI (Web of Science), Scopus, EBSCO,  
and other databases.

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 24.4 days after  
submission; acceptance to publication is undertaken in 4.6  
days (median values for papers published in this journal in  
the first half of 2025).

##### Journal Rank:

CiteScore - Q1 (Computer Science (miscellaneous))
